--Method for Creating and Rendering Client-side User Interfaces Via Custom Tags--

In the Specification

In the Summary of the Invention, please amend the two paragraphs beginning at line 26 on page 3 and ending on line 14 on page 4 as follows:

~~In accordance with still another embodiment of the invention, an apparatus for receiving a markup language document containing a plurality of tags over a network is provided. The document includes a plurality of tags made up of a first subset of tags which is comprised of custom tags associated with function executable instructions and a second subset which is comprised of conventional tags. The apparatus includes a display device for presenting information to a user. A browser is operatively connected to the display device for parsing the document and detecting the custom tags and the conventional tags. The apparatus further includes a memory storing a first set of instructions for operating the browser and further storing a second set of instructions for implementing the function executable instructions. The apparatus also includes a processor, communicatively associated with the memory and the display device, which is capable of executing the first and second set of machine-readable instructions.~~

The foregoing and other features and advantages of the ~~system and method~~ for creating, rendering and controlling user interfaces will be apparent from the following more particular description of preferred embodiments of the ~~system and method~~ as illustrated in the accompanying drawings in which like reference characters refer to the same parts throughout the different views.
